Department of Information Technology

LAB PRACTICE IV

LIST OF LAB ASSIGNMENTS

Sr.No	Title of Assignments
1	Demonstrate use of tensorflow and pytorch by implementing simple code in python
2	Implement Feedforward neural networks with Keras and TensorFlow MNIST Digit dataset
3	Implement Feedforward neural networks with Keras and TensorFlow CIFAR dataset
4	Build image classification model using CNN on fashion MNIST dataset.
5	Build image classification model using CNN on pneumonia X RAY IMAGE dataset.
6	Build image classification model using CNN on FOOD dataset.
7	Build Brain tumor classification model with CNN
8.	Build Recurrent Neural Network by using the numpy library
9	Implement simple autoencoder to reconstruct MNIST digits. Add sparsity constraint on the encoded representations
10	Use Autoencoder to implement anomaly detection on credit card dataset
11.	Implement the concept of image denoising using autoencoders on MNIST data set
12.	Implement object detection using Transfer learning on food dataset
13.	Implement image classification using transfer learning on animal dataset
14.	Implement the Continuous Bag of Words (CBOW) Model.
